# Zariff Danial

Mobile Developer (Flutter and Dart)

Klang, Selangor, Malaysia · zariffdanial.zul@gmail.com · linkedin.com/in/zariffdanial · github.com/ZriffDnny · zariffdanial.vercel.app

## SUMMARY

Mobile developer shipping a production Flutter app to three app stores. Sole mobile developer on MyTax, the official tax filing app of Malaysia's Inland Revenue Board (LHDN), with over 3 million lifetime installs. Previously fixed a broken TOTP feature in an internal authenticator app at Bestinet. Open to full-time Flutter or mobile developer roles in Malaysia.

## EXPERIENCE

### Solutions Developer (Mobile App Developer)

Nov 2025 to Present

**Zen Computer Systems**, Cyberjaya, Selangor. Contract, on-site.

- Sole mobile developer for MyTax, LHDN's official tax filing app, live on the App Store, Google Play and Huawei AppGallery with 3M+ lifetime installs. Own bug fixes, features, localisation and store submissions.
- Maintain a Flutter codebase for iOS and Android and a separate HMS codebase for Huawei that uses Huawei Push Kit in place of Firebase Messaging, kept in sync on UX, API integration and localisation.
- Fixed refund and audit status screens and login prompts across four iOS releases in ten days as 2026 filing opened. Moved server push to the FCM HTTP v1 API; added topic broadcasts and Android image notifications.
- Cleared 200+ analyzer warnings per codebase; added CI, pre-push checks and first unit tests to both. Upgraded all three builds, moving 25+ dependencies up a major version, for Google Play's API 36 target and 16 KB page size (May 2026).

### Mobile Application Developer

Jun 2025 to Nov 2025

**Bestinet Sdn Bhd**, R&D department, Cyberjaya, Selangor. Hybrid. Khazanah K-Youth placement via Aisling Group.

- Took over a broken TOTP feature in an internal Flutter authenticator app and got one-time codes displaying correctly.
- Traced the failure to two defects: a controller init routine never called from the view layer, and an invalid type cast on a secure-storage read that threw on already-enrolled devices.
- Added error handling and early returns on failed device or secret-key lookups, so a missing key never produces a code.
- Built the authenticator screen in GetX to a supplied design (30-second countdown ring, digit-by-digit code), kept the existing tap to copy, and applied the same branding to the app shell and login screen.

### IT Support Intern (Industrial Training)

Sep 2023 to Dec 2023

**Pantai Hospital Klang**, IT department, Klang, Selangor.

- Resolved hardware and software problems for doctors and staff across most departments, and set up workstations.
- Trained new staff on the newly launched MyHealth360 patient app and promoted it to patients at an in-hospital booth.

## SELECTED PROJECTS

### HalalSaji

Flutter, Dart, Provider, Firestore

Personal app for finding halal food nearby, built solo in June 2026: separate Halal Certified and Muslim Owned badges, filters by halal status and cuisine, and favourites. Read-only Firestore data layer ready; runs on sample data for now.

### Silent Support

React Native (Expo), TypeScript, Supabase, Groq

Personal MVP, built solo: tap a feeling for an instant calm response, swapped for an AI reply only if it arrives within 2.5 seconds and passes a server-side tone filter. Local-first history with opt-in sync. github.com/ZriffDnny/Silent-Support-App

### Anti-theft Fingerprint Bag Lock

Arduino, C++, fingerprint sensor, GPS, GSM

Final year project, built solo. Opens only to the owner's enrolled fingerprint; after three failed matches it texts the owner a theft alert and the bag's GPS coordinates. Case study: zariffdanial.vercel.app/baglock

## SKILLS

| | |
|---|---|
| **Mobile** | Flutter, Dart, Provider, GetX, Firebase Messaging, Huawei HMS (Push Kit), REST APIs (Dio), flutter_secure_storage, biometric login (local_auth), push notifications, TOTP (RFC 6238), App Store, Google Play and AppGallery releases |
| **Languages** | Dart, JavaScript, TypeScript, Python, C++, PHP, Java, SQL, HTML, CSS |
| **Web and data** | React, React Native (Expo), Node.js, MySQL, Supabase, scikit-learn, pandas, NLP |
| **Tools** | Git, GitHub, Android Studio, VS Code, Postman, Figma, Gradle, npm |
| **Spoken** | Bahasa Malaysia (native), English (fluent, spoken and written) |

## EDUCATION

### Bachelor of Computer Science (Hons.) Netcentric Computing

Oct 2020 to Dec 2023

**Universiti Teknologi MARA (UiTM)**, Shah Alam. CGPA 3.32. Dean's Award, fourth semester.

### Data Science Analyst Bootcamp

Mar 2024 to Aug 2024

**PEOPLElogy Group**. Python, data wrangling, machine learning and NLP. Capstone: movie genre prediction from plot summaries.

## CERTIFICATIONS

| | |
|---|---|
| **IBM, 2025** | Developing Mobile Apps with Flutter Specialization (3 courses) |
| **Meta, 2025** | Front-End Developer Professional Certificate (9 courses, including Advanced React) |
| **In total** | 101 certifications, including CompTIA Tech+ (2025), all listed at linkedin.com/in/zariffdanial |
